Exercise 2
Connecting Two LAN Networks

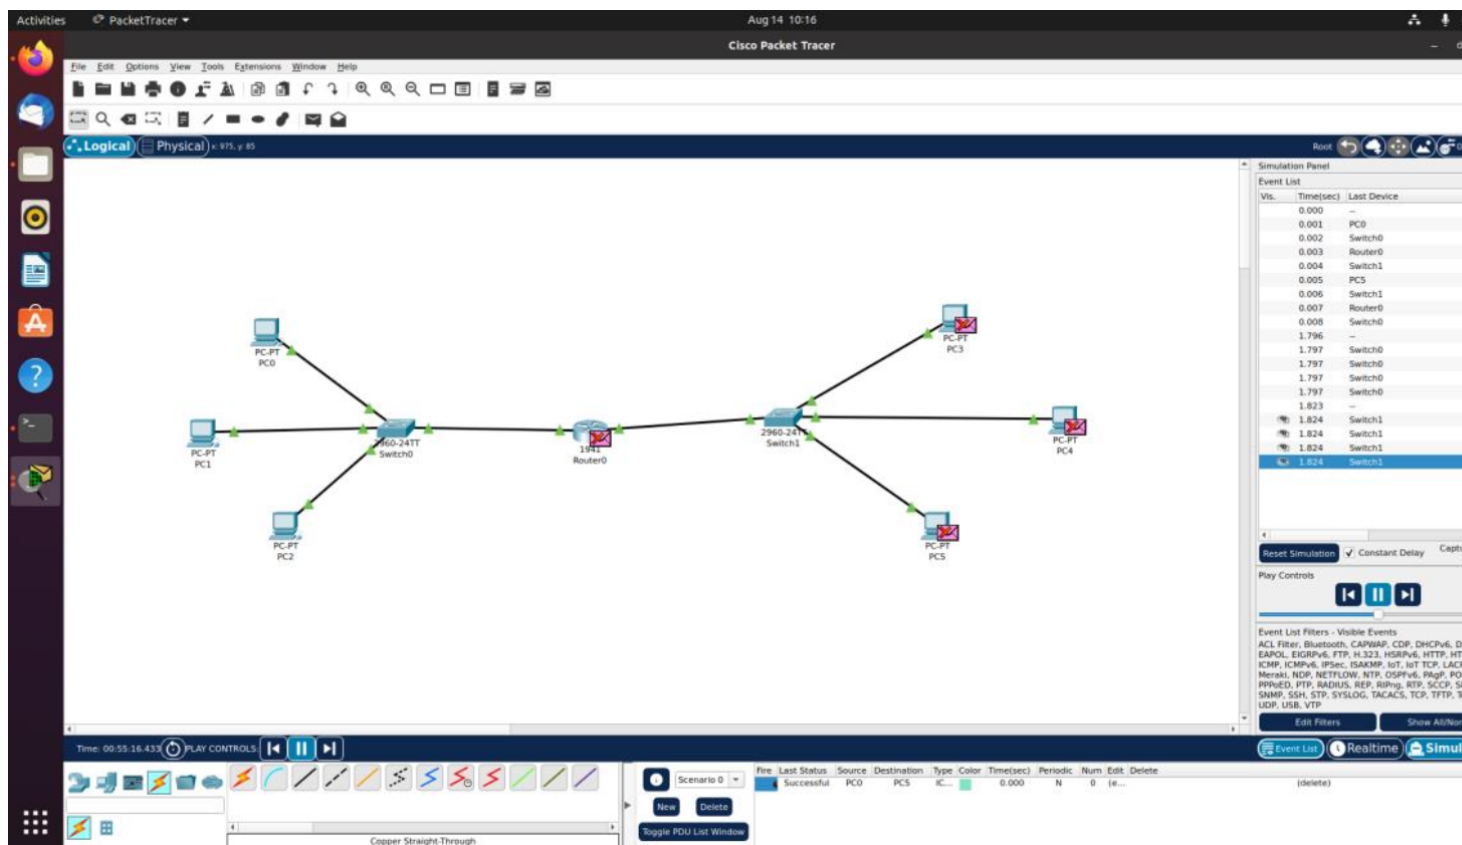

Name : Aathish Sivasubrahmanian 3122215001001

Aim:

Simulate connection of two LAN networks using
Cisco Packet Tracer.

Procedure:

1. Click on 'end devices' button in the bottom left corner.
2. Select 'PC' icon and place 6 pcs on the screen.
3. Place these PCs in 2 clusters such that each cluster contains 3 PCs each.
4. Place a switch near to both the clusters.
5. Connect all the 3 PCs to their respective switches.
6. Connect both the switches to a router.
7. Configure the default gateway and IPs for every PC in both the clusters such that the default gateway is same for every PC in a local network.
8. Configure the gateways for the router.
9. Select a PC from one cluster and send packets to another PC in the other cluster using PING command.
10. Click on simulate button to visualize the traversal of packets.

Learning Outcomes

A LAN connection was successfully created and simulated in Packet Tracer
